

The 12th International Conference of Indigenous and Cultural Psychology Centenary Conference of Albert Bandura's Contribution to Science

**Leadership, organization, health, and sustainability in the global context:
Promoting human agency for the self, family, school, community, society,
and environment**

**International Association of Indigenous & Cultural Psychology (IAICP),
Jendral Achmad Yani University, Padjadjaran University & Esa Unggul University,
Bandung, Indonesia, August 4-6, 2025**

Albert Bandura is the most cited figure in contemporary psychology, the highest-impact living author in Humanities and Social Sciences. He is known for his groundbreaking research on self-efficacy, observational learning, behavioral change, and moral behavior. His landmark books are: *Social learning and personality development* (1963), *Principles of behavior modification* (1969), *Social foundations of thought and action: A social cognitive theory* (1986), *Self-efficacy: The exercise of control* (1997), *Moral disengagement: How good people do harm and live with themselves* (2016). In 2021, he completed the substance of the book, *Social cognitive theory: An agentic perspective on human nature*. It has been edited and finalized by Daniel Cervone (2023). He received honors and awards from many institutions, including, The National Academy of Medicine (1989), the APA (1980, 2004), the World Innovation Foundation (2004), The International Union of Psychological Science (2012), The Order of Canada (2015), National Medal of Science (2016), and 19 Honorary Degrees.

Professor

Albert Bandura receives the National Medal of Science on May 19, 2016

President

Barack Obama confers the National Medal of Science at the White House

For Albert Bandura, human agency and self-efficacy are not just abstract concepts, but basic principles that guided his life. He came from humble beginnings, born in 1925 to an immigrant Polish father and Ukrainian mother in the frontier town of Alberta, Canada. His parents built a farm but encouraged him to pursue higher education. At the University of British Columbia, he discovered a passion for psychology. He received his Ph.D. at the University of Iowa and joined Stanford University in 1953.

His famous Bobo doll experiment and snake phobia modeling experiments formed the basis of the self-efficacy theory. He revealed how self-efficacy underlies transformational behavioral changes and led him to articulate the Social Cognitive Theory. The theory outlines the scientific mechanisms of how people develop forethought and exercise control over their lives in contrast to the mechanistic theories of behaviorism, unconscious impulses, or personality traits. The traditional theories are just descriptive categories which assume biological and mechanical determinants of human behavior, but they failed to identify the scientific mechanism and process to explain behavioral change. Research in epigenetic and neurobiological research provides falsification of traditional theories and confirm the scientific validity of the self-efficacy and Social Cognitive Theory.

Social Cognitive Theory provides an agentic perspective on human nature and how people have the power to determine the course of their lives to realize their goal. Through forethought and intention, a person can bring the future to the present and act on it to reach one's goal. His research covers various fields of psychology and disciplines in social sciences. He applied his theory to transform individuals' lives and society around the world. He analyzes the impact of moral disengagement that has accelerated the destruction of the environment, society, and governance (ESG). He points out that through human engagement, agency and self-efficacy, we can develop creative and innovative solutions at the individual, social, and collective level.

Organized by: IAICP - Unjani - Unpad - UEU

ICICP 2025

The 12th International Conference of Indigenous and Cultural Psychology: Centenary Conference of Albert Bandura's Contribution to Science

Leadership, organization, health, and sustainability in the global context: Promoting human agency for the self, family, school, community, society and environment

KEYNOTE SPEAKERS

Prof. Michael Morris, Ph.D.
Columbia University, USA

Prof. M. Ali Berawi, Ph.D.
Universitas Indonesia, Indonesia

Prof. Susumu Yamaguchi, Ph.D.
University of Tokyo, Japan

Prof. Daniel P. Cervone, Ph.D.
University of Illinois, Chicago - USA

Prof. Kay Bussey, Ph.D.
Macquarie University, Australia

Prof. Ian Roberge, Ph.D.
York University, Canada

Prof. Akira Tsuda, Ph.D.
Teikyo University of Sciences, Japan

Prof. Sik-hung Ng, Ph.D.
City University of Hongkong, Hongkong

Prof. Rosnah Ismaili, Ph.D.
University of Cyberjaya, Malaysia

Prof. Virgo Handoyo, Ph.D.
California Baptist University, USA

Dr. M. Nadeem Kasmani, MD, MMSc.
Harvard Medical School, USA

Mary Bandura, Ph.D.
USA

INVITED SPEAKERS

BANDUNG, INDONESIA
AUGUST 4-6, 2025

Topics:

- Environmental sustainability and transformation
- Leadership, career development, work values, and organizational effectiveness
- Indigenous & cultural knowledge, creativity and cultural transformation
- Social change and societal harmony
- Community resilience, education and disaster relief
- Mental health, stress, depression and counselling
- Happiness, subjective well-being and quality of life
- Biomedical sciences, biomolecular & clinical sciences, health education and hospital administration
- Technology, social media, virtual reality, and digital transformation
- Child development, the role of parents, family and peers
- Learning in education, sports, art and music
- Role of religion and faith in promoting family & community cohesion
